# DIGI CONNECT<sup>®</sup> SENSOR+

Easy-to-install and roll-out ready, battery-powered cellular gateway solution

Digi Connect Sensor+ is a fully integrated, battery powered cellular gateway with I/O for connecting to a wide range of external sensors. Designed to work in rugged industrial environments, the Connect Sensor+ is the ideal solution for companies looking to add remote monitoring and diagnostics in places where power is not easily available. Its easy installation, reliability and low data usage make remote monitoring possible in areas where it was previously cost prohibitive.

Local protocol support allows the Connect Sensor+ to communicate with Wired HART and/or Modbus sensors and capture sensor diagnostics along with data. This enables users

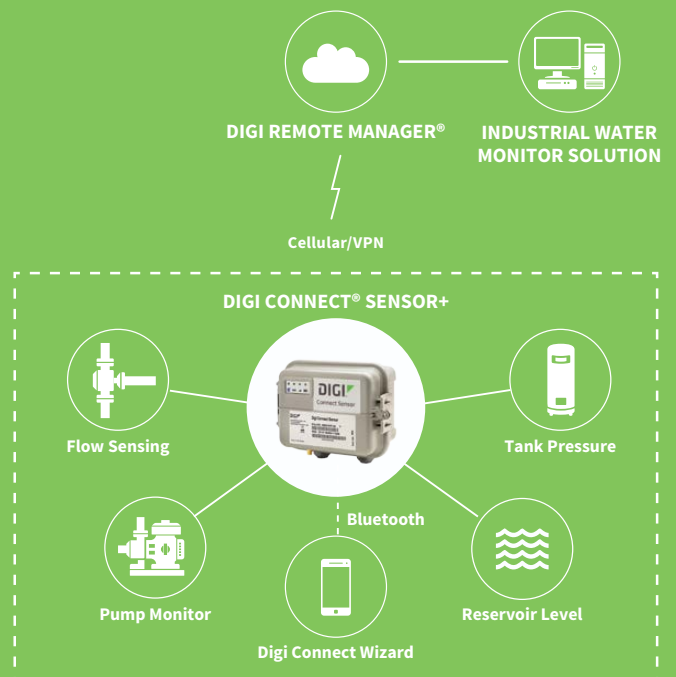

to not only monitor their data but also remotely diagnose the health of their sensors. Digi Connect Sensor+ leverages Digi Remote Manager<sup>®</sup>, enabling customers who need to monitor large numbers of sensors to easily integrate that data into existing applications or work with third-party applications

Digi Connect Sensor+ works with Digi Connect Wizard. This smartphone application is the first of its kind for this type of battery powered gateway. It gives local installers, technicians or drivers instant feedback of sensor values over Bluetooth.

## BENEFITS
